luv2code

Spring Boot support for Unit Testing

What do you need for Spring Boot unit testing?

- Access to the Spring Application Context
- Support for Spring dependency injection
- Retrieve data from Spring application.properties
- Mock object support for web, data, REST APIs etc ...

Unit Testing support in Spring Boot

- Spring Boot provides rich testing support

- `@SpringBootTest`
  - Loads the application context
  - Support for Spring dependency injection
  - You can access data from Spring application.properties
  - ...

Spring Boot Starter - for Testing support

- Add Maven dependency

pom.xml

```
<dependency>
   <groupId>org.springframework.boot</groupId>
   <artifactId>spring-boot-starter-test</artifactId>
   <scope>test</scope>
</dependency>
```

Starter includes a transitive dependency on JUnit 5

We get it for free :-)

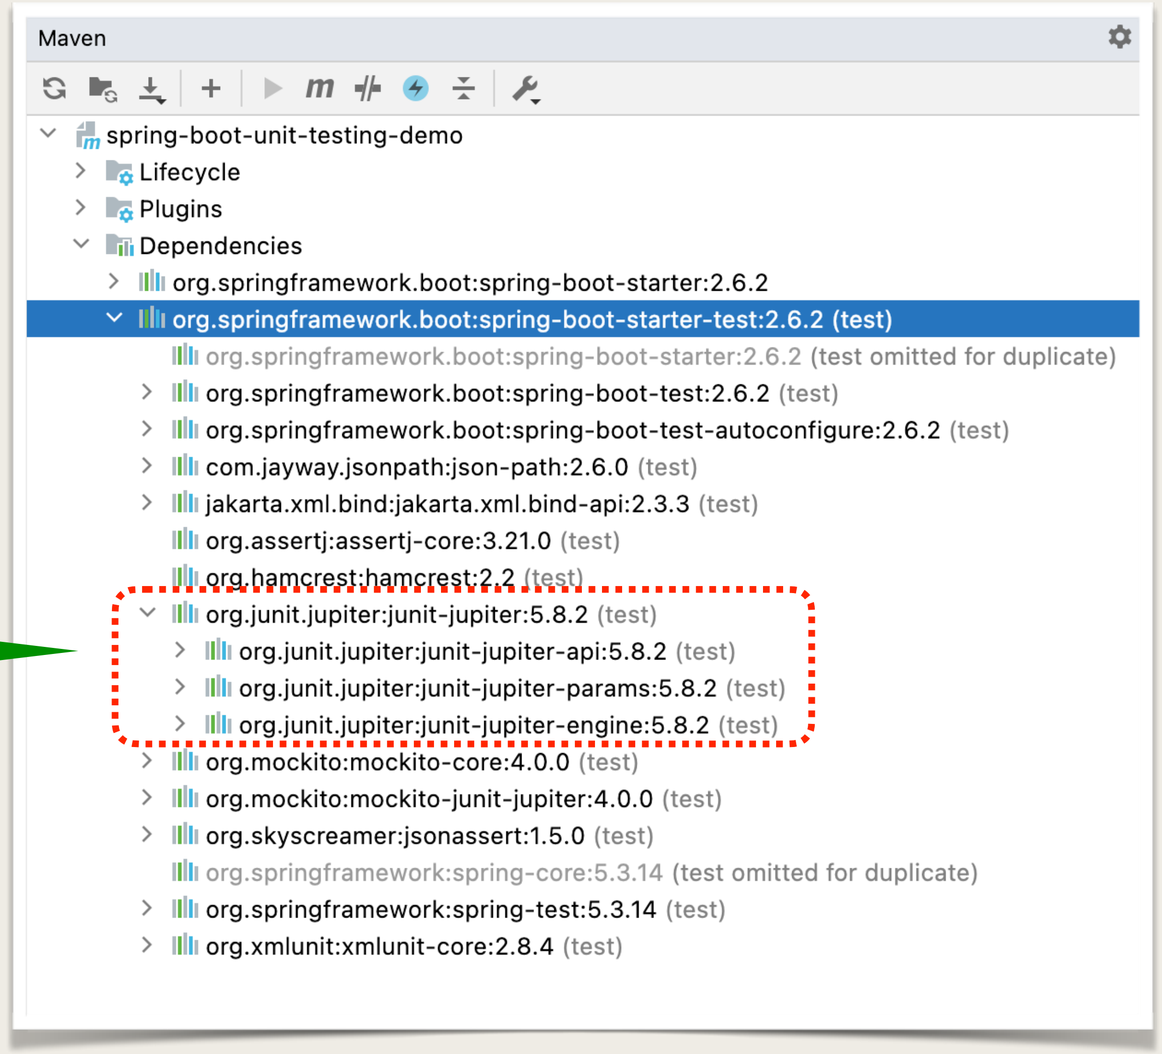
Spring Boot Starter - Transitive Dependency for JUnit 5

pom.xml

```
<dependency>
    <groupId>org.springframework.boot</groupId>
    <artifactId>spring-boot-starter-test</artifactId>
    <scope>test</scope>
</dependency>
```

Starter includes a transitive dependency on JUnit 5

We get it for free :-)



Spring Boot Starter - Transitive Dependency for JUnit 5

At command-line, type:

```
mvn dependency:tree

[INFO] Scanning for projects...
[INFO]
[INFO] -------------< com.luv2code:spring-boot-unit-testing-demo >-------------
[INFO] Building spring-boot-unit-testing-demo 1.0.0

[INFO]       +- org.junit.jupiter:junit-jupiter-params:jar:5.8.2:test
[INFO]       \- org.junit.jupiter:junit-jupiter-engine:jar:5.8.2:test

...
```

Starter includes a transitive dependency on JUnit 5

We get it for free :-)

Spring Boot Test

ApplicationExampleTest.java

```
import org.junit.jupiter.api.Test;
import org.springframework.boot.test.context.SpringBootTest;

@SpringBootTest
public class ApplicationExampleTest {

    @Test
    void basicTest() {
        // ...
    }

}
```

Loads Spring Application Context

Inject Spring Beans

ApplicationExampleTest.java

```
import org.junit.jupiter.api.Test;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.beans.factory.annotation.Autowired;

@SpringBootTest
public class ApplicationExampleTest {

    @Autowired
    StudentGrades studentGrades;

    @Test
    void basicTest() {
        // ...
    }
```

Injection

```
@Component
public class StudentGrades {

    ...

}
```

Access Application Properties

application.properties

```
info.school.name=luv2code
info.app.name=My Super Cool Gradebook
```

ApplicationExampleTest.java

```
import org.junit.jupiter.api.Test;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.beans.factory.annotation.Value;

@SpringBootTest
public class ApplicationExampleTest {

    @Value("${info.school.name}")
    private String schoolName;

    @Value("${info.app.name}")
    private String appInfo;

    @Test
    void basicTest() {
        // ...
    }

}
```

Access data from application.properties

Access Application Context

ApplicationExampleTest.java

```
import org.junit.jupiter.api.Test;
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.context.ApplicationContext;

@SpringBootTest
public class ApplicationExampleTest {

    @Autowired
    ApplicationContext context;

    @Test
    void basicTest() {
        // ...
    }

}
```

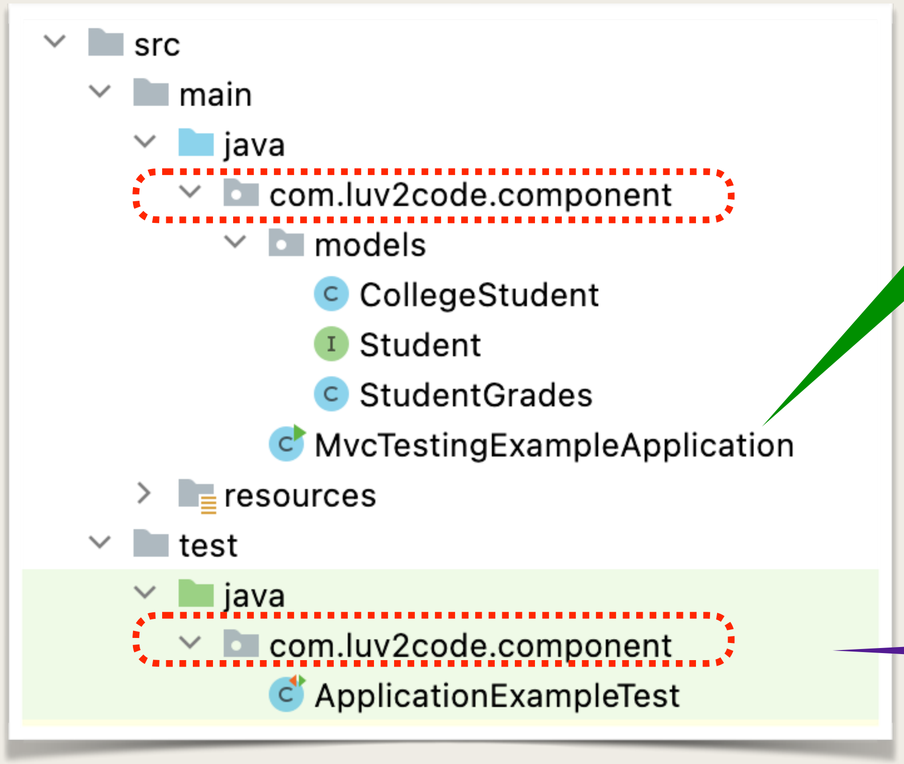
Access Spring Application Context

@SpringBootTest configuration

Place your test class in `test` package same as your `main` package

- This implicitly defines a base search
  - Allows you to leverage default configuration
  - No need to explicitly reference the main Spring Boot application class

More on Configuration



Main Spring Boot application class

Automatically component scans sub-packages

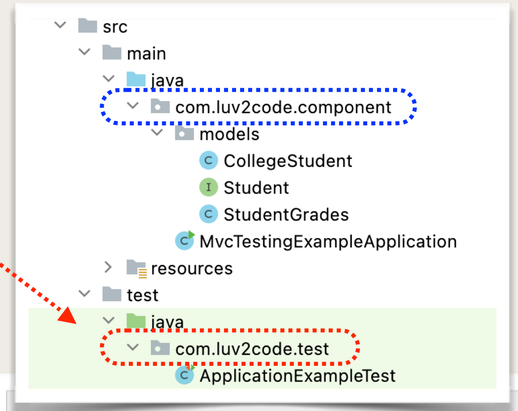
Same package names

... no additional config required ...

More on Configuration

- Default configuration is fine if everything is under
  - **`com.luv2code.component`**

- But what if test class is in a different package???
  - **`com.luv2code.test`**



Explicitly reference main SpringBoot class

```
package com.luv2code.test;
…
@SpringBootTest(classes = MvcTestingExampleApplication.class)
public class ApplicationExampleTest {
  …
}
```

Our Sample Project

- Student grading system ... code was created by a previous employee
- The code doesn't have any tests ... gasp!
- We've been tasked with developing the unit tests ... yaayy!!!!
